EXPERIENCE

Full Stack Software Engineer (October 2021 - June 2026)

MediRecords | 📍 Sydney, Australia (Remote)

- Delivered and supported implementation of 300+ functional requirements for a healthcare platform supporting SaaS and self-hosted architectures, including a secure Department of Defense deployment across Clinical and Admission modules in mission-critical environments
- Spearheaded full-stack technical discovery for complex system features, designing React/TypeScript frontend interactions and Java backend integration strategies that guided production implementation and system behavior
- Migrated monolithic services to a microservices architecture, improving system modularity, scalability, and maintainability
- Designed and implemented an internal engineering tool to streamline data deployment workflows and accelerate cross-team development
- Designed and developed reusable React components and new application pages to support scalable frontend architecture
- Built and integrated GitHub Actions CI/CD pipelines with automated quality gates, regression workflows, and deployment automation to improve release confidence
- Developed automated UI regression test scripts to detect and prevent frontend defects in production workflows
- Partnered with product managers and business analysts to translate requirements into structured functional specifications and technical implementation plans
- Leveraged modern AI-assisted development workflows and developer tooling to accelerate implementation, improve code quality, and enhance engineering efficiency
- Provided production support and issue triage for end-user incidents, coordinating resolution efforts and ensuring system stability

Software Engineer (October 2020 - April 2021)

TwistResources | 📍 Clark Freeport Zone, Philippines

- Mentored colleagues through code review, pair programming, team discussions
- Increased test coverage to 40%; resolved several bugs in the process
- Identified and resolved previously unknown concurrency issues
- Wrote reusable React components

Associate Software Engineer (June 2018 - October 2020)

TORO Cloud | 📍 Clark Freeport Zone, Philippines

- Rewrote API for parsing and generating Swagger and OpenAPI documents
- Wrote indexing services for IDE search engine library
- Extended service invoker library to support invocations against Groovy
- Refactored existing feature implementations for better performance, readability, and extensibility (such as FTP client 'endpoint', one-liners, application-wide content indexer, AST node services)
- Wrote interceptors to implement licensing restrictions in code
- Wrote unit and integration tests using TestNG and JUnit
- Profiled and benchmarked application performance to find bottlenecks
- Participated in daily stand-ups, sprint reviews, and sprint plannings
- Engaged in code reviews
- Investigated and fixed various bugs
- Wrote product documentation and video tutorial content

Associate Software Engineer *(Part Time, April 2018 - May 2018)*

TORO Cloud | 📍 Clark Freeport Zone, Philippines

- Used in-house software to generate OpenAPI schemas from API documentation websites
- Developed case studies, and presented proof-of-concept projects using proprietary commercial products covering domains such as testing and database operations

Intern *(November 2017 - March 2018)*

TORO Cloud | 📍 Clark Freeport Zone, Philippines

- Studied and applied software development essentials such as version control, automated testing, and clean code
 - Facilitated agile development ceremonies such as daily stand-ups, sprint plannings, and reviews
 - Produced an aggregation tool that can consume large volumes of data, and then render records visually
-

PROJECTS

Boxurious *(October 2023 - December 2023)*

Freelance | 📍 Remote

A web app that provides optimal layouts with regards to cutting pieces of a box from a given stock piece.

- Designed and conceptualized intuitive user interfaces.
- Developed responsive and visually appealing front-end components using Mantine (a React components library) on top of NextJS
- Utilized the computational capabilities and rapid performance of Rust libraries by integrating them into Node.js as addons with the use of Neon.

Compliance Management System *(November 2021 - July 2022)*

Freelance | 📍 Remote

A system for managing data privacy related compliance requirements

- Envisioned and designed user interfaces.
- Developed web pages by leveraging Chakra UI components within the Next.js framework.
- Crafted RESTful web services using Spring Boot to ensure robust and efficient backend functionality.

Digital Marketplace *(April 2021 - July 2021)*

Freelance | 📍 Remote

An e-commerce site for artists who want to monetize their creations

- Designed web pages using pre-made Chakra UI components and customized using Tailwind CSS
 - Built RESTful APIs using NextJS
-

SKILLS

Programming Languages: Java, Groovy, JavaScript, TypeScript, Python, PHP, Bash

Frameworks/Libraries: Java EE, Spring, Node.js, React, NextJS, Tailwind CSS, Chakra UI, Kendo UI, Cypress, Cucumber

Databases: MySQL, MongoDB, Redis, PostgreSQL

Methodologies: Object Oriented Programming, Agile Development, Test Driven Development

Continuous Integration: Git, Gitlab, Bamboo, Maven, Gradle, Yarn, NPM, GitHub Actions

Collaboration Tools: Jira, Confluence

Other Technologies: REST, SOAP, HTML, CSS

EDUCATION

Bachelor of Science in Computer Science

Holy Angel University | Pampanga, Philippines | 2014 - 2018
