TECHNICAL SKILLS

Languages: Java, TypeScript, JavaScript, Groovy, Python, PHP, Bash

Frontend Ecosystem: React, Next.js

Backend Frameworks: Spring, Spring Boot, Node.js, Java EE

Database & Caching: PostgreSQL, MySQL, MongoDB, Redis

Testing & CI/CD: GitHub Actions, Bamboo, Cypress, Cucumber, TestNG, JUnit, Maven, Gradle, Yarn, NPM

Methodologies & Tools: System Architecture, Microservices, Agile/Scrum, Test-Driven Development (TDD), Jira, Confluence

PROFESSIONAL EXPERIENCE

MediRecords | 📍 Remote (Sydney, Australia)

Full Stack Software Engineer (Senior Scope / Module Owner) | *January 2023 – June 2026*

- Led the full-stack implementation and delivery of 300+ functional requirements specifically for a mission-critical Department of Defense (DoD) deployment, scaling the healthcare platform across SaaS and self-hosted architectures.
- Spearheaded technical discovery and architecture for high-impact system features, designing React/TypeScript frontend patterns and Java/Spring Boot integration strategies that set production standards.
- Served as the primary technical authority and decision-maker for the admissions medication module, managing cross-team dependencies, resolving technical inquiries, and directing the architectural outcome of the product.
- Partnered directly with Product Managers and Business Analysts to translate ambiguous business requirements into structured functional specifications and technical execution plans.

Full Stack Software Engineer (Mid-Level) | *October 2021 – January 2023*

- Led critical production support and incident triage, coordinating rapid resolution efforts for end-user defects to ensure maximum system uptime and stability.
- Leveraged modern developer tooling and AI-assisted workflows to accelerate feature delivery, elevate code quality, and improve development efficiency.
- Executed targeted service migrations from a legacy monolith architecture to scalable microservices, successfully improving system modularity and overall maintainability.
- Designed and built an internal data-deployment engineering tool that streamlined internal workflows and accelerated development velocity across multiple teams.
- Developed reusable, performant React components and dynamic application views to establish a scalable, cohesive frontend architecture.
- Built and integrated automated CI/CD pipelines using GitHub Actions, introducing quality gates, regression workflows, and deployment automation to increase release reliability.
- Authored comprehensive automated UI regression test scripts to proactively detect, isolate, and prevent frontend defects in critical production workflows.

TwistResources | 📍 Clark Freeport Zone, Philippines

Software Engineer (Mid-Level) | *October 2020 – April 2021*

- Mentored engineering colleagues through code reviews, active pair programming sessions, and technical discussions to elevate team coding standards.
- Accelerated engineering quality by scaling test coverage to 40% while systematically resolving legacy edge-case bugs.
- Identified and resolved deep-seated, previously unknown concurrency issues within the core platform to stabilize multi-threaded application performance.
- Developed reusable frontend components in React to drive UI consistency and reduce frontend redundancy across application modules.

TORO Cloud | 📍 Clark Freeport Zone, Philippines

Associate Software Engineer (Mid-Level) | July 2019 - October 2020

- Rewrote API for parsing and generating Swagger and OpenAPI documents
- Wrote indexing services for IDE search engine library
- Extended service invoker library to support invocations against Groovy
- Refactored existing feature implementations for better performance, readability, and extensibility (such as FTP client 'endpoint', one-liners, application-wide content indexer, AST node services)
- Wrote interceptors to implement licensing restrictions in code
- Profiled and benchmarked application performance to find bottlenecks

Associate Software Engineer (Junior-Level) | June 2018 - June 2019

- Participated in daily stand-ups, sprint reviews, and sprint plannings
- Engaged in code reviews
- Investigated and fixed various bugs
- Wrote unit and integration tests using TestNG and JUnit
- Wrote product documentation and video tutorial content

Associate Software Engineer (Part-Time) | April 2018 - May 2018

- Used in-house software to generate OpenAPI schemas from API documentation websites
- Developed case studies, and presented proof-of-concept projects using proprietary commercial products covering domains such as testing and database operations

Software Engineering Intern | November 2017 - March 2018

- Studied and applied software development essentials such as version control, automated testing, and clean code
- Facilitated agile development ceremonies such as daily stand-ups, sprint plannings, and reviews
- Produced an aggregation tool that can consume large volumes of data, and then render records visually

PROJECTS

Boxurious (Freelance) | October 2023 - December 2023

- Engineered a high-performance web application designed to calculate optimal layout configurations for cutting physical pieces from raw stock material.
- Optimized computationally intensive layout algorithms by compiling high-speed Rust libraries into the Node.js backend using Neon.
- Developed a fully responsive, intuitive frontend interface utilizing Next.js and the Mantine component ecosystem.

Compliance Management System (Freelance) | November 2021 - July 2022

- Architected a web application designed to track, manage, and audit data privacy compliance requirements.
- Developed RESTful APIs utilizing Spring Boot to ensure highly efficient backend processing and secure data access.
- Crafted clean, accessible frontend architectures utilizing Chakra UI components integrated within the Next.js framework.

Digital Marketplace (Freelance) | April 2021 - July 2021

- Designed custom user interfaces for an e-commerce platform by tailoring pre-made Chakra UI components with Tailwind CSS.
- Built and deployed RESTful APIs leveraging Next.js backend capabilities to drive marketplace monetization features.

EDUCATION

Bachelor of Science in Computer Science

Holy Angel University | Pampanga, Philippines | 2014 - 2018
